Notes on version number:

This is version 4 of this report replacing version 3c published in July 2011.

Acknowledgments

This JEC Consortium study was carried out jointly by experts from the JRC (EU Commission's Joint Research Centre), EUCAR (the European Council for Automotive R&D), and CONCAWE (the oil companies' European association for environment, health and safety in refining and distribution), assisted by experts from Ludwig-Bölkow-Systemtechnik GmbH (LBST) and AVL List GmbH (AVL).

Conversion factors and fuel properties

All WTT data is stored in LBST's E³ database and that software was used to calculate the energy and GHG balances of the pathways. The full details of each pathway can be found in the workbooks included in Appendix 4. A summary of the results can be found in Appendix 2.

This appendix gives conversion factors and details the fuel properties used in the study.

CO₂ emissions from combustion (assuming total combustion)

1 kg of a fuel with C% carbon emits:

$$1 \times C\% / 100 / 12 \times 44 = (0.0367 \times C\%) \text{ kg of CO}_2$$

1 MJ of a fuel with λ MJ/kg (LHV) and C% carbon emits:

$$1 / \lambda \times C\% / 100 / 12 \times 44 = (0.0367 / \lambda \times C\%) \text{ kg of CO}_2$$

* assuming total combustion

The EU-mix is the gas that is deemed to be available to a vehicle as CNG.

The Russian gas composition is used for marginal gas use in WTT pathways.

Abstract

This Version 4.0 replaces Version 3.c [Report EUR 24952 EN] published in 2011

As the Commission's in-house science service, the Joint Research Centre's mission is to provide EU policies with independent, evidence-based scientific and technical support throughout the whole policy cycle.

Working in close cooperation with policy Directorates-General, the JRC addresses key societal challenges while stimulating innovation through developing new standards, methods and tools, and sharing and transferring its know-how to the Member States and international community.

Key policy areas include: environment and climate change; energy and transport; agriculture and food security; health and consumer protection; information society and digital agenda; safety and security including nuclear; all supported through a cross-cutting and multi-disciplinary approach.
